

Full Log Home General Information

Full Log Home Packages are available upon request. Packages include all the full logs needed as shown on plan for walls and porches, in between the row sealant, log spikes or screws, dowels, a row by row log layout, and log construction guide. It is recommended that the gable ends be stick-framed and log-sided with a matching log siding inside and out to complete the log look. Full log gables and log loft joists are also available but need to be cut on site. All corner logs will be notched at the factory for easier erection, but some site cutting and end trimming of logs is necessary. A full set of blueprints needs to be submitted to Meadow Valley for quoting purposes. Meadow Valley Log Homes is not responsible for compliance of local building or energy codes. Some floorplans are better suited for log siding instead of full logs. Please consult Meadow Valley for more information. All log profiles are air-dried Wisconsin White pine, maximum length of 24 feet, except the 3.5x9 timbers which are kiln-dried in 8', 12', and 16' lengths only.

Profiles Available:

3.5 x 9 Timber 8" D-Log 9" Swedish Cope 9 x 9 Timber

All profiles feature a butt and pass corner system except the 9" Swedish Cope which has a Saddle Notch Corner System. The timbers are also available in Dovetail. Call 800-657-4666 for more information on Full Log Home Packages.

Full Log General Information

Logs and Timbers are Eastern White Pine and harvested in Wisconsin. All Full Log Products are air-dried and will naturally develop checks or cracks as they dry. This is an unavoidable natural process. Each individual log will contain the heartwood of the tree. A check will never pass through the heartwood, which maintains the structural integrity of the log.

CHECKS IN LOG

HEARTWOOD AND CHECKS

Full Log Products are raw log products and may require cleaning and/or sanding before finishing. We recommend using a breathable stain and avoid using any sealers like varnish or polyurethane.

Log Products are available in even lengths only, 8–16 feet. Longer lengths may be available, but an upcharge applies. The 9 Inch Diameter log is our standard size, other diameters may be available, but lead times will vary.

9" Coped Full Log

With Saddle Notch Corners

**9 Inch Coped
Full Log**

Species	Air-dried Wisconsin White Pine
